Question 4

Use the function `boxplot` in the seaborn library to determine whether houses with a waterfront view or without a waterfront view have more price outliers.

```
[30]: # Create a boxplot comparing waterfront view and price
sns.boxplot(x='waterfront', y='price', data=df)

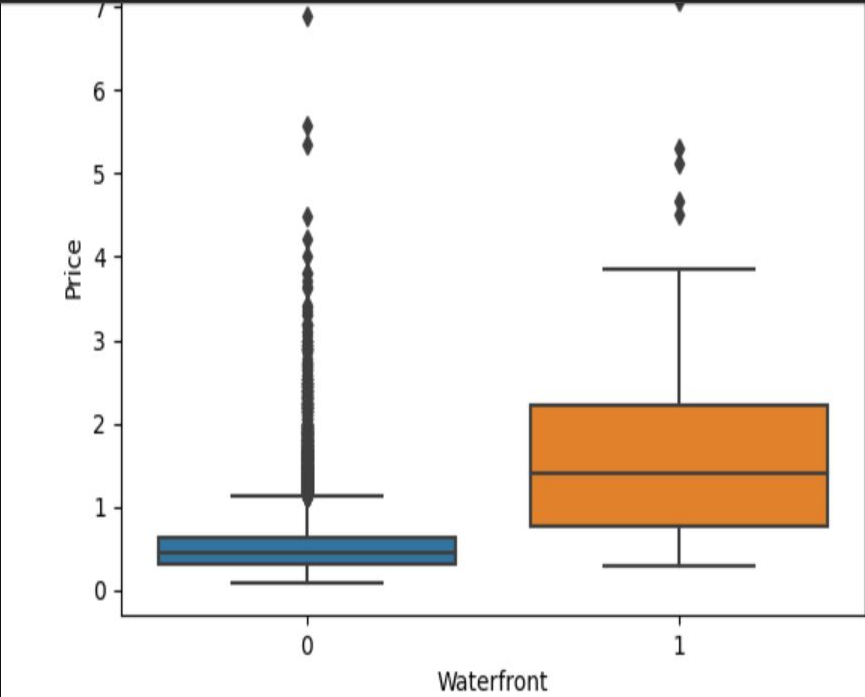

# Add labels for the x and y axes
plt.xlabel('Waterfront')
plt.ylabel('Price')

# Display the plot
plt.show()
```
